Use IntegratedML to 'predit' diseases

Hi Developers,

IntegratedML is a feature helps us and our teams easily implement machine learning (ML) without dedicated ML experts and data scientists. If you do not need particularly complex ML function, integratedML is a good choice and convenient that only requires executing 3 SQL queries to build predictive models directly from InterSystems IRIS to ML engine.

I have recorded a video that walk through the basic of IntegratedML and implement an application from open exchange called diseases predictor by [@Yuri Marx](#)

Check this out: [Link to my video](#)

Please feel free to leave any comments

Have a good day!
