How could we get Authorization Bearer from a SOAP Service

Hello, first of all thanks for your time and help.

We do send from a REST POST request using SoapUI software, an "Authorization Bearer".

POST http://[IP]:[Port]/aplicaciones/scs/informescctest/Servicios.SOAP.InformesCConcertadosv01r00.cls HTTP/1.1
Accept-Encoding: gzip,deflate
Content-Type: application/xml
Authorization: Bearer eyJ0e[...]
SOAPAction: http://SCS.Servicios/InformesCConcertadosv01r00/ResultadosER7
Content-Length: 1871
Host: AAA
Connection: Keep-Alive
User-Agent: Apache-HttpClient/4.1.1 (java 1.5)

Our mission is to get it inside a SOAP Service.

The Service's ADAPTER is:

Parameter ADAPTER = "EnsLib.SOAP.InboundAdapter";

This service Extends from:

Class Servicios.SOAP.InformesCConcertadosv01r00 Extends (EnsLib.SOAP.Service, ITB.HL7.BS.XMLService)
[ProcedureBlock]

Could you help us, please?

We have already tried:

Method ResultadosER7(mensaje As %Stream.FileCharacter, authorization As %String(MAXLEN="")) As
%Stream.FileCharacter [Final, ProcedureBlock =
1, SoapAction = "http://SCS.Servicios/InformesCConcertadosv01r00/ResultadosER7", SoapBindingStyle =
document, SoapBodyUse = literal, WebMethod]
{

    set token = ##class(%SYS.OAuth2.AccessToken).GetAccessTokenFromRequest(.status) set token =
..Adapter.%GetParameter("Authorization")

We have already read:
