How to transform a routine into a line to use in the terminal

Hello everyone,

I talked to a colleague and he said that at the other company he worked, they converted a routine into a line and used that in the terminal like a command. So, I want to know if we have this function native in Intersystems products, or maybe was a program they created, my colleague doesn't remember and this would be useful for me now.

Edit:

Example of function:

```
func1
  set var="Test"
  write var
  quit 0
```

Become a line command:

```
 USER>set var="Test" write var quit 0
```

Best Regards,
Flávio.
