How to delete system tasks?

How do I delete these system tasks that are obsolete.. The task in the attached image has no possibility to delete...

The screenshot shows the InterSystems Management Portal interface. At the top, there are navigation tabs for various applications like 'U01', 'U02', 'U19-FC', etc. The main header includes the InterSystems HealthShare logo, 'Management Portal', and a 'Test System' button. Below the header, the user is logged in as 'SuperUser' in the '%SYS' namespace. The breadcrumb trail is 'System > Task Manager > Task Schedule > Task Details'. The main title is 'Task Details' with buttons for 'Edit', 'History', 'Resume', 'Suspend', 'Delete', 'Export', and 'Run'. A message states: 'You do not have permission to edit task: SQL-querystatistieken bijwerken'. Below this, there are two tables: 'GENERAL INFORMATION' and 'EXECUTION DETAILS'. The 'GENERAL INFORMATION' table lists task name, description, namespace, class, priority, batch mode, type, and status. The 'EXECUTION DETAILS' table lists user, frequency, and schedule dates. At the bottom, there is a 'Task Manager is currently running' section with a 'Suspend' button and a table of scheduled tasks. The table has columns for Task Name, Task Type, Namespace, ID, Suspended, Last Finished, and Next Scheduled. The task 'SQL-querystatistieken bijwerken' is highlighted in red and has a 'Suspend Leave' status.
