FHIR Practitioner search by PRACTITIONER return only one record

Hi Community,

I need assistance to query ODS FHIR server to retrieve only one record. At the moment I am getting multiple records returned as seen below.

Is there a way to specify a parameter that will return a single record instead of 21 because it's the same practitioner returned 21 times.

The screenshot shows a REST client interface with a GET request to `https://testserver/csp/healthshare/hsods/fhir/r4/Practitioner?identifier=VP0280425`. The request is configured with Basic Auth, Username 'Test', and a masked Password. The response status is 200 OK. The response body is a JSON array with 21 items. A black arrow points to the 'total' field in the first item, which has a value of 21.

```
1 {
2   "resourceType": "Bundle",
3   "id": "3797bc22-75a2-11ed-a9b2-067dde80553a",
4   "type": "searchset",
5   "timestamp": "2022-12-06T20:11:49Z",
6   "total": 21,
7   "link": [
8     ...
9   ]
10 }
```
