# SQL in Config.ConfigFile returns with fatal error

Hello,

I tested the query on the Config.ConfigFile table of the Namespace %SYS, it returned 3 lines and a fatal error:

```
SELECT
*
FROM Config.ConfigFile
```

The screenshot shows the InterSystems SQL interface. At the top, there are tabs: 'Catalog Details', 'Execute Query' (selected), 'Browse', and 'SQL Statements'. Below these are buttons: 'Execute', 'Show Plan', 'Show History', 'Query Builder', 'Display Mode' (dropdown), 'Max 1000', and a 'more' link. The query editor contains the SQL: `SELECT * FROM Config.ConfigFile`. Below the editor, the execution statistics are displayed: 'Contador de Linhas: 3 Desempenho: 0.003 Segundos 348 Referências a Global 1459 Comandos Executados 0 latência de leitura do disco'. A table with 7 columns (ID, CPFName, Comments, Name, Product, SectionHeader, Version) shows 3 rows of data. Below the table, it says '3 linha(s) afetada(s)'. At the bottom, a red error message is displayed: `[SQLCODE: <-400>:<Ocorreu um erro fatal >]` and `[%msg: <Unexpected error occurred: <LIST>zLogicalToOdbc+6^%Collection.AbstractList.1>]`.

ID	CPFName	Comments	Name	Product	SectionHeader	Version
IRIS  Cluster  Cluster	IRIS		Cluster		Cluster	0
IRIS  ConfigFile  ConfigFile	IRIS		ConfigFile	IRIS	ConfigFile	2022.13
IRIS  Conversions  Conversions	IRIS		Conversions		Conversions	2022-05-31 12:45:28

I tested the same query on other IRIS instances (including a 2021.1 instance) and got the same error.

Is it a bug in IRIS or is there something wrong with the installations?

Anyone who can test and leave in the answers if they got the same result, I would be grateful.

Thank you for your attention.
