Certificate request to local PKI server not working

Hi Team ,

Can I please check if anyone has encountered SOAP authentication error when trying to submit a certificate signing request or when trying to get certificate .

I configured a local CA server without SMTP configuration and I configured a local CA client. These steps worked okay.

Then I tried to Submit Certificate Signing Request to Certificate Authority server and I am getting the following error :

ERROR #6248: SOAP response is a SOAP fault: faultcode=wsse:FailedAuthentication faultstring=The security token could not be authenticated or authorized faultactor= detail=

Similar error is appearing when I try to use the Get Certificate(s) from Certificate Authority server option
