## How to apply Late Binding and Early Binding for a data transformation

Hi Community,

Can anyone explain how to apply early binding and late binding to a transformation.

Example:

I have DOB value as 12/12/2000

In transformation i need to format DOB value to 20001212-->this value i can achieve by using `$E(DOB,7,10)_$E(DOB,4,5)_$E(DOB,1,2)`

```
<assign value='source.{MSH:7}' property='target.{MSH:7}' action='set' />
```

But how can i apply early binding and late binding to the above Data tranformation?
