How to execute a. pivot table and get results into %DeepSee.ResultSet passing. in filters

Hi

I have a pvot table defined. that generates a set of data. I want. to. execute the pivot table programatically which I believe involves using %DeepSee.ResultSet. Does someone have an example showing how to apply filters to the results?

For. example

[DateTime of Filing].[Date].[Date Filed Year] = &[2023]

Thanks
