My InterSystems Learning Lab is down

Hello,

Created my Learning Lab yesterday evening and for the first hour or so everything was fine, but after that it just stopped working and I get Server unavailable for Management Portal:

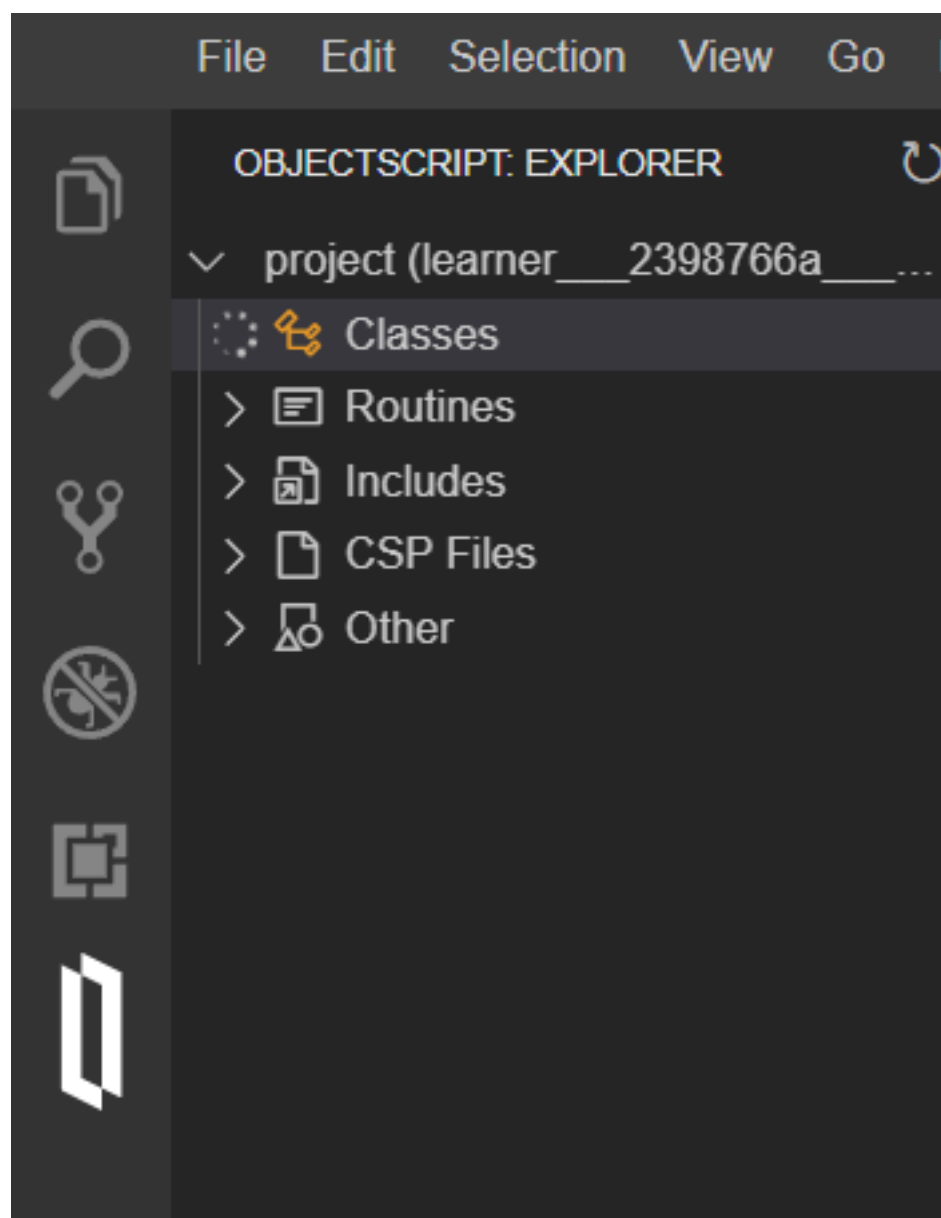

Web Gateway Version 2022.1.0.209.0

Server Availability Error

Server is currently unavailable

And nothing would load in VSCode

Is there anything to be done? Because I wanted to upload my student's test on it. And the system wouldn't allow me to create another server, because I already have one.
