CCR transition to live shows critical error

Hi Community,

I have created Tier 1 CCR and when I move it to Live it shows the below error.

I initially had changes deployed through a different CCR to the TEST environment and were not deployed to LIVE for the same class.

I tried to cancel it so that I can move these latest changes but I still get the below message.

Perforce Details
Perforce Activity   ERROR: Critical error occurred. Another CCR has been detected as a prerequisite and marked as such. Changelists have been shelved for your manual resolution. (PID:21684)
