Saving Data from HL7 message into SQL Table

Hi community,

I am working on Converting Non HL7 message (Using record maps) into HL7 message.

1.Can anyone share few details how to save Non HL7 message into SQL table and the converted HL7 message into SQL table

2.In Message Viewer is there any SQL tables are linked to the session id or where the information regarding the message will be stored? Will the message trace details are stored in globals or in SQL table,If yes can anyone share the details in which tables or globals will it be stored?

<input type="checkbox"/>	#	ID	Time Created	Session	Status	Error	Source
<input type="checkbox"/>	1	1925	16:30:43.974	1921	Completed	OK	Customjson
<input type="checkbox"/>	2	1923	16:30:43.964	1921	Completed	OK	SampleJsonConversion

Joe
