Q: Need help with "into:CODE, :VALUE"

Hello all,

I just started learning SQL and am also new to Cache...

I am dealing with a simple SQL query and trying to understand the components of the following expression do:

```
STRING(cityname, ' - ', citycode) into :CODE, :VALUE
```

I understand what the STRING function does. However, I am lost after that:

```
"into:CODE, :VALUE"
```

What do these do?

Thanks!

Deguza
