irisusr as owner by using installer from terminal

We have IRIS on Linux. When I create database NEO_PAVIG by Management Portal, than owner for files and directories is "irisusr".

But owner is "mfukatko" (my username) after creating database NEO_Pxxx_G using installer based on `##class(%Installer.Manifest).%Generate()` from command line in terminal.

Name	Size	Changed	Rights	Owner	Group
..		13.01.2023 9:18:52	rwxr-xr-x	root	root
NEO_PAVI_G		25.01.2023 21:35:36	rwxrwxr-x	irisusr	irisusr
NEO_Pxxx_G		26.01.2023 13:52:24	rwxrwxr-x	mfukatko	irisusr

I'd like to have same owner in both cases. Is it possible to achieve it in the second case as well?

Our manifest in istaller:

```
XData Install [ XMLNamespace = INSTALLER ]
{
<Manifest>
  <If Condition='(##class(Config.Namespaces).Exists("${Namespace}")=0) '>
    <Log Text="Creating namespace ${Namespace}" Level="0"/>
    <Namespace Name="${Namespace}" Create="yes" Code=
"${Namespace}_R" Ensemble="1" Data="${Namespace}_G">
      <Configuration>
        <Database Name="${Namespace}_R" Dir=
"${DatabaseDir}${Namespace}_R" Create="yes"/>
        <Database Name="${Namespace}_G" Dir=
"${DatabaseDir}${Namespace}_G" Create="yes"/>
        <RoutineMapping Routines="qewdConsumer" From="NEO_R" />
        <ClassMapping Package="Ap" From="NEO_R" />
        <ClassMapping Package="COMMON" From="NEO_R" />
        <ClassMapping Package="EXT" From="NEO_R" />
        <ClassMapping Package="Ipl" From="NEO_R" />
        <ClassMapping Package="M" From="NEO_R" />
        <ClassMapping Package="NEO" From="NEO_R" />
        <ClassMapping Package="OTE" From="NEO_R" />
        <ClassMapping Package="Prd" From="NEO_R" />
        <ClassMapping Package="xBASE" From="NEO_R" />
        <ClassMapping Package="xng" From="NEO_R" />
        <ClassMapping Package="xx" From="NEO_R" />
      </Configuration>
    </Namespace>
    <Log Text="End Creating namespace ${Namespace}" Level="0"/>
  </If>
</Manifest>
```

irisusr as owner by using installer from terminal
