Using ODBC on linux

I already have a working setup with:

- Ubuntu 21.10
- Unixodbc 2.3.6
- ODBC-2018.1.5.659.0-Inxubuntux64
- libcacheodbcur64.so

I have tried to update to:

- Ubuntu 22.04
- Unixodbc 2.3.9

But, i am getting "SQLDriverConnect: 0 [unixODBC][Driver Manager]Driver does not support the requested version".

So, I have tried to switch to:

- libcacheodbcur6435.so
- ODBC-2018.1.7.721.0-Inxubuntux64.tar

But i am getting same error. Please, could someone help me?
