Autentication OAuth 2.0 Microsoft Office 365

Hi,

I use Caché COS and I'm having trouble doing a POP3 on the Microsoft email server using OAuth 2.0 authentication.

I'm using the following program to accomplish this task:

```
QGPOP ; Recebe e-mail da Microsoft Office 365
Set server=##class(%Net.POP3).%New()
Set server.port=995
Set server.StoreAttachToFile=1
Set server.AttachDir="D: /HOME /CNTIRET"
Set servername="outlook.office365.com"
Set user="importacao@ferrolene.com.br",pass="xxxxxx"
Set AccessToken="xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx"
set server.SSLConfiguration="Transnovag"
Set status=server.Connect(servername,user,pass,AccessToken)
Do $System.Status.DisplayError(status)
set status=server.GetMailBoxStatus(.NumMensagens,.TamTotalMensagens)
w !!,"Nr. de mensagens na pasta: ",NumMensagens,!!
Do $System.Status.DisplayError(status)
s closeserver=server.%Close()
Quit
```

I'm getting the following error message:

```
%SYS>ZR D ^QGPOP
Erro #6015: Servidor POP3 reportou erro: -ERR Authentication failure: unknown user name or bad password..
```

Has anyone ever been able to make that connection?

Grateful.

Claudio Vieira
