## Manage your classes dependencies

When you need to know the impact on a change in your project, it is very useful to see class dependencies in a network diagram. The IRIS Connections project allows you to see it.

## IRIS Connections installation

If you want to install using ZPM:

```
zpm:USER>install iris-connections
```

If you want to install using Docker:

1. Clone/git pull the repo into any local directory:

```
$ git clone https://github.com/yurimarx/iris-connections.git
```

2. Open the terminal in this directory and run:

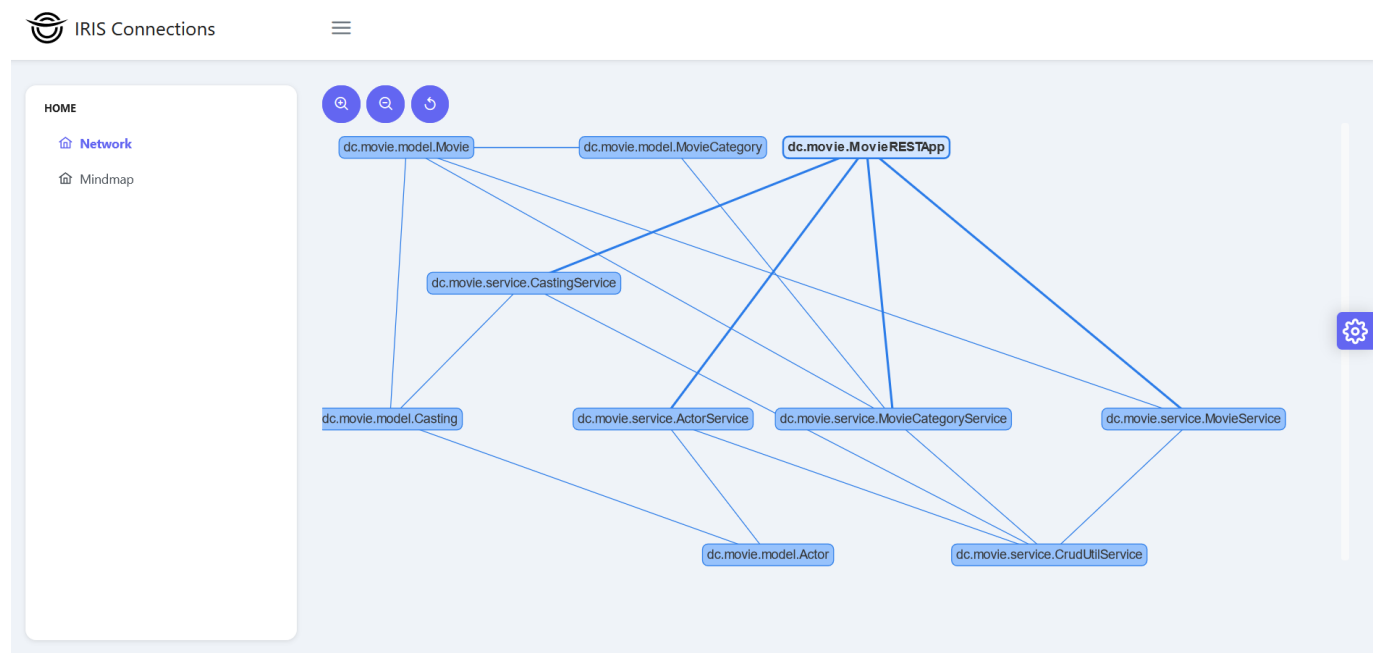

```
$ docker-compose up -d --build
```

## Analyze your classes dependencies:

Go to your browser and access:

<localhost:52773/connections/index.html>

No go to Network and see your classes dependencies:

If you want to see the movie app dependencies, use ZPM to install movie app: `zpm:USER > install movie`

Enjoy!
