Receiving a uncomplete JSON file

Hi Guys,

I'm using the below code but I'm getting an uncomplete JSON file, so it seems that the command S obj=Httprequest.HttpResponse.Data.Read(Httprequest.HttpResponse.Data.Size) is not reading the whole file, so maybe the file is too big so is there a max size or can I change something in my call ?

The uncomplete file that I received so far is about 3.5MB

```
set Httprequest = ##class(%Net.HttpRequest).%New()
 Set Httprequest.SSLConfiguration="RTLS"
 Set Httprequest.Server="vibra-api-prod.azurewebsites.net"
 Set Httprequest.Https=1
 Set Httprequest.Timeout=30
 set Httprequest.ContentType="application/json"
 Do Httprequest.SetHeader("Accept","*/*")
 Do Httprequest.SetHeader("Accept-Language","enUS" )
 Do Httprequest.SetHeader("Authorization","Bearer "Token)
 set tSc = Httprequest.Post("/api/jobs")
 S StatusCode=Httprequest.HttpResponse.StatusCode
 S obj=Httprequest.HttpResponse.Data.Read(Httprequest.HttpResponse.Data.Size)
```

Thanks
