Create Stored procedure with multiple sql statements

I need a stored procedure where I can execute multiple delete from statements.

This will work to create a stored procedure, but when I add in other delete from, get error invalid sql statements when try to create

```
CREATE PROCEDURE DeleteSpecimenTwo
  (IN Specno VARCHAR(50))
BEGIN
DELETE FROM PCONT WHERE PSPECNO = :Specno;
END;
```

This doesn't work

```
CREATE PROCEDURE DeleteSpecimenTwo
  (IN Specno VARCHAR(50))
BEGIN
DELETE FROM PCONT WHERE PSPECNO = :Specno;

DELETE FROM PSPEC WHERE PSPECNO = :Specno;
END;
```

Any suggestions

Thanks

Louie
