Error when running ^SystemPerformance utility

Hi all,

When I run the ^SystemPerformance utility to collect performance data about my IRIS instance (community), it manages to collect all sorts of data except for data related to ^perfmon. I am using %SYS to run the utility which should have all privileges, not sure what's meant by the below error message

`perfmon`

```
Command failed to run.  
Error response from 'logman' command:
```

```
Error:  
Access is denied.  
Try running this command as an administrator.
```

Thank you!
